

# Southern Moreton Bay – Broadwater

## Bottlenose Dolphin Community

Dolphin Research Australia Inc. has been researching and getting to know the populations of dolphins in the South East Queensland region since 2010. We have identified several resident communities and among these, a small female community that lives in the Southern Moreton Bay-Broadwater area. These females with their calves can be seen foraging for prey along the channels, canals and estuaries within the region. You can help us monitor the health of this small, isolated population by reporting your sightings to [www.dolphinresearchaustralia.com](http://www.dolphinresearchaustralia.com).
